

Workshop on Organic Detectors and Materials @ NSS-MIC 2017

Sunday 22nd October 2017

Workshop is now FULL

In this workshop we aim to bring together all those interested in organic materials for radiation detection, with a view to sharing the current state-of-the-art, identifying common challenges to address, and building a cohesive research community. Topics will cover the material properties and device physics of the following systems:

- Polymer and long-chained molecules
- Single crystal organic materials
- Scintillation/photosensor hybrid organic systems
- Organic perovskite materials

The workshop will consist of invited overview talks by recognised experts in the field of organic materials and devices, plus an informal lunchtime poster session.

Workshop Registration is now CLOSED

Due to the strong interest in this workshop, the registration is now closed and the workshop is full. We regret that we cannot accommodate delegates on the day who have not registered for the workshop.

Scientific Program

The workshop consists of invited review talks by recognised experts in the field of organic materials and devices.

Our invited speakers for the workshop are:

John Anthony, University of Kentucky, USA

Laura Basirico, University of Bologna, Italy

Olivier Dhez, ISORG/CEA, France

Gerwin Gelinck, TNO, The Netherlands

Bernard Kippelen, Georgia Tech, USA

Sandro Tedde, Siemens, Germany

Sergii Yakunin, ETH-Zurich, Switzerland

The full program for the day, including speaker abstracts, can be found on the NSS-MIC conference online program.

We will not be publishing papers from the workshop, however attendees are encouraged to submit their work for publication directly to the *IEEE Transactions on Nuclear Science* journal.

Further Information

For further information please contact the workshop organisers:

Beatrice Fraboni, University of Bologna (beatrice.fraboni@unibo.it)

Paul Sellin, University of Surrey (p.sellin@surrey.ac.uk)
